MATÍAS CALÓ

AI Full-Stack Developer · Founder, Aturno

Buenos Aires, Argentina · +54 9 11 3003-2002 · matiascalo2@gmail.com · linkedin.com/in/matias-calo · aturno.app

PROFILE

Full-stack developer who designed and built Aturno, a WhatsApp-native appointment scheduling app, end-to-end — frontend, backend, auth, and deployment — while also owning the product and go-to-market decisions behind it. I build with an AI-assisted workflow (Claude Code, Codex) as a daily practice, not just a buzzword, and I'm deepening that into applied AI engineering through an ongoing program covering LangChain, LangGraph, RAG, and multi-agent systems (MCP). Comfortable across the stack — JS/TS, React, Node.js, Python, SQL — and used to shipping alone, end to end, with no team to hand things off to. Bilingual, Digital Business graduate, Italian/EU citizen (no sponsorship needed for EU roles).

KEY STRENGTHS

- Full-stack shipping: took Aturno from a blank repo to a deployed, working product — frontend, backend, integrations, infra — solo.
- AI-assisted development as a daily habit: Claude Code and Codex are core to how I write, debug, and ship, not an occasional tool.
- Actively building AI engineering depth: LangChain, LangGraph, RAG pipelines, and MCP through a structured, ongoing program.
- Product + business fluency: I don't just implement specs — I've defined the product, the data model, and the go-to-market myself.

FLAGSHIP PROJECT

Founder & Full-Stack Developer | Aturno — Independent Project (Thesis → B2B SaaS) | 2025 – Present

- Built Aturno end-to-end: a WhatsApp-native appointment scheduling app for local businesses (salons, clinics, gyms), from data model to UI.
- Frontend in React and JavaScript; backend and auth on Firebase; deployed and running in production on Render.
- Built a Python lead-scraping tool integrated with the Google Places API to identify and prioritize target businesses.
- Used Claude Code and Codex throughout the build to accelerate iteration, refactor faster, and expand scope solo.
- Presented Aturno as the thesis project for the Bachelor's degree in Digital Business (2025).

SKILLS

- Languages & Frameworks: JavaScript, TypeScript, Python, React, React Native, Node.js, HTML, CSS, SQL.
- AI Engineering: Claude Code, Codex, LangChain, LangGraph, RAG, MCP (in progress, Coderhouse).
- Backend & Infra: Firebase, REST API integrations, Render.
- Product & Business: end-to-end product ownership, data-driven prioritization, go-to-market strategy.
- Languages: Spanish (native), English (B2, IB Diploma).

EDUCATION

Licenciatura en Negocios Digitales (Digital Business) | Universidad de San Andrés | 2025

International Baccalaureate Diploma (Bilingual) | St. John's School

ADDITIONAL TRAINING

- Coderhouse: AI Engineer program — LangChain, LangGraph, RAG, MCP, multi-agent systems (in progress).
- 10+ years of independent technical/creative production (Premiere Pro, After Effects, Ableton Live) — comfortable self-teaching and shipping without a team.
